

Supplementary List to K. Hansen: Vascular Plants in the Faeroes

D. Bloch, J. Aldenius, T. Lindell

In the summers of 1976—1979 a number of plants were found in localities not mentioned in K. Hansen: Vascular Plants in the Faeroes.

As this book with its distribution maps is a valuable source of reference for use on botanical excursions, and in botanical research, we considered that the publication of a supplementary list was warranted.

K. Hansen's nomenclature has been adhered to.

With regard to *Senecio vernalis*, it is the first time this has been reported in the Faeroes. It is believed to have been brought with fodder.

The specimen is in the herbarium of Náttúrugripasavnið in Tórshavn.
